Gallagher Fluid Seals Provides Sealing Solutions, Through its Value Added Products and Services, for All Your Application Needs!

Packaging/Kitting:

Gallagher Fluid Seals offers many options to customize your product packaging: Customer Logo, Private Labeling, Bar-coding, Product Color-coding, Customized Printing, Individually Bagged Components and Kits, Installation and Instruction for use Cards, and more - [Let us know your requirements.](#)

Come See Gallagher's New Display at the Following Upcoming Trade Shows

Rapid Prototyping:

Rapid prototyping takes designs from 3D modeling or computer aided design (CAD) software to create parts for evaluation. The 3D printer transforms these digital designs by stacking thin horizontal cross-sections, which creates successive layers until the model is complete. A simple idea can quickly become a working prototype.

Bar-Coding:

Gallagher Fluid Seals can bar-code all packaging materials, which helps to easily and quickly identify details such as dates, batches, weights, quantities, and dimensions. Bar-coding and asset-tagging are critical to tracking and maintaining inventory.

The Seal Specialist

Gallagher Fluid Seals Provides Sealing Solutions, Through its Value Added Products and Services, for All Your Application Needs!

Color-Coding:

Using color is a simple visual control tool to help employees easily identify different products. By color-coding products help you enhance corporate efficiency. This method has also been used to improve safety, quality, and productivity.

Coatings:

Gallagher Fluid Seals offers a variety of surface treatments for O-rings and molded rubber parts, in the form of dry or wet coatings. Surface treatments are used for numerous reasons; such as friction reduction, ease of installation, and identification.

Coating	Definition
PTFE	Thin, dry thermoplastic coating
ParkerSlick	Non-PTFE, dry thermoplastic coating
Silicone Dip	Clear, shiny, dry coating
McLube	Clear, shiny, dry coating providing extra low friction
Mineral Oil	Clear, shiny, wet coating (limited compound availability)
Molykote	Silvery, semi-dry coating providing low friction (messy)
Silicone	Oil Clear, shiny, wet coating (limited applications)
Parylene	Clear, dry gas, USP class VI or ISO 10993-6 FDA approved

Laser Printing:

With today's fast-paced, integrated production lines, identification marks are crucial to differentiate between visually similar O-rings. Equally important, is the customers' ability to identify the product manufacturer to avoid receiving imitation, or counterfeit seals. From an intricate logo to customer part numbers, we can provide identification markings that best fit the necessary requirements. The uses are broad enough to accommodate any market and application.
