The Seal Specialist

Gallagher Adds to Life Science Product Offerings

Gallagher Fluid Seals is proud to be an authorized distributor of Parkers new Medical Systems Division (MSD) product line. "At Gallagher we have increased our medical device line of products recently for the life science and medical device markets and the addition of these Parker products will help us expand our offerings even more" says Joseph Gallagher, President of Gallagher Fluid Seals.

Parker recently announced the acquisition of the Hi-Tech Group, a leader in the supply of elastomeric and thermoplastic components, sub-assemblies and finished medical devices to the life science marketplace. The acquisition significantly advances the Seal Groups position in the highly specialized life science market with products such as, bio-fluid management, intravenous equipment, medical infusion pumps, masks, septums, catheters and diaphragms. Parker's Medical Systems Division is a single source solution provider to medical and pharmaceutical OEMs.

Gallagher offers a wide range of USP Class V1 and FDA materials. These materials can be supplied in both standard and custom shapes. Life science applications include medical devices, diagnostic equipment, medical delivery, pharmaceutical manufacturing and bio-tech.
